

Tabla E.4 Valores críticos de χ^2

Para un número dado de grados de libertad, el elemento representa el valor crítico de χ^2 que corresponde a un área de la cola superior especificada (α)

| Grados de libertad | Áreas de la cola superior | | | | | | | | | | | |
|--------------------|---------------------------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|

Para valores más grandes de grados de libertad (gl) se puede usar la expresión $Z = \sqrt{2\chi^2} - \sqrt{2(gl) - 1}$ y el área de la cola superior que resulta se puede obtener en la tabla de la distribución normal estándar (Tabla E.2a).
